

Problem Solving - Time

Here is the time each child goes to sleep.

Find out what time they each wake up if the first two sleep 9 hours and the second two sleep 9.5 hours.

Amit: asleep at 22:00

Anja: asleep at 21:45

Sunil: asleep at 21:55

Asha: asleep at 22:30

Which of these times would not change if you were using 24-hour clock?

- 3 o'clock in the middle of the night.
- Quarter to 2 after lunch
- Midnight
- Twenty past midday.
- 6pm

Use 24-hour clock to write any that will change.
